INTERNSHIP 101

-My February Highlight-

At the start of the new month, I started working for my internship as a full-stack web developer. I design a website including user interface (UI) and user experience (UX), then code it from front-end (coding the basic structure of the website) up to the back end (connecting the website to the database). The hardest part is designing the UI and UX because I need to give the user a user-friendly design where you don't need to tell them what to do next. What to click and what to insert. From there I lasted 2 weeks of designing of course with the supervision of the head of publication in the Center where I am working.

Then after those 2 weeks of working on designing, I felt relieved that there is new 8 co-interns who will work on the website with me. From there also, I am shocked because we are not just working on 1 website, we will be working on 3 websites that are connected then I'll be the one who'll guide them. Honestly, at first, I felt pressured and excited at the same time knowing that they are all boys and fourth-year students with a computer engineering major. But as the time goes by, I felt relaxed with them.

So here's the summary of our task:

INTERNSHIP 101

-My February Highlight-

Then besides doing the website, I also make sure that I can be able to help the other interns aside from my team. I help them in terms of making publication materials, printing important documents, and photocopying what our supervisors need. If I was to ask if it is tiring managing the website and helping other interns then my answer is yes it is tiring but it is enjoyable since I can share my thoughts and ideas with them. And also since we also have different majors, this internship makes me aware of what they are doing and they are too vise versa.
